Hey Matt. We're still working on it. Thanks, R.

Hi Robert—Still hoping for clarification tonight on what the administrator's order means. We were looking at that as a potential lead-in for our next version of story, but not without some details on how many sites potentially at play here and whether cleanups also on hold.

Please let us know.

Thanks Robert. How many mines does that apply to? And does that mean cleanup work also will stop? Statement says investigations so I'm guessing not...

Please let us know.

Statement from EPA Administrator to Regional Administrators RE: ongoing field work at mines

EPA Administrator Gina McCarthy today sent the below directive to Regional Administrators regarding ongoing field work at mines:

"While we continue to investigate the root causes of last week's release of mining waste at the Gold King Mine in Colorado, we are instructing our Regions to immediately cease any field investigation work at mines including tailings facilities, unless there is imminent risk in a specific case. We are in the process of initiating an independent assessment by a sister federal agency or another external entity to examine the factors that led to last week's incident. Based on the outcome from that assessment, we will determine what actions may be necessary to avoid similar incidents at other sites. While we stand down on existing field investigations and assessments at these mining sites, we also are instructing our Regions to identify existing sites with similarities to the Gold King Mine site and to identify any immediate threats and consider appropriate response actions."
